DETAILED ACTION

Oath/Declaration

The signed oath or declaration is missing. The Application also does not contain a copy of any priority documents.

Election/Restriction

1. Applicant's election of claims 3 and 4 with traverse filed August 23, 2001, in Paper No.6 is acknowledged. The traversal is on the ground(s) that Applicant disagrees with examiner's statement that the process of invention I can be practiced by another materially different apparatus from that of invention II, such as an FCC unit. Applicant argues that FCC units heat using heat exchange with granulated catalyst and not by means of rotor blades, and thus FCC units lack the capability of carrying out one of the steps of claim 1. This is not found persuasive because FCC units can have mixing capability whereby rotor blades can add to he heat supplied to the reaction.

In addition, examiner notes that this argument may be moot because in addition to the reasons for restriction previously given, the apparatus of invention II can be used simply as a mixer, thereby practicing another and materially different process.

The restriction is maintained. Claims 1, 2 and 5 are withdrawn from consideration as not drawn to an elected invention. Elected claims 3 and 4 will be examined.

Art Unit: 1764

Specification

The title contains non-standard spellings for olefins and hydrocarbons.

Claim Rejections - 35 USC § 112

2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim recites the casing covered on the inside by heat insulation. It is not clear what is that the insulation is inside. It is likely that the insulation is inside the skin and outside the casing, but the claim can be interpreted as saying the casing has insulation inside the casing or inside the skin. Correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Dinulescu, U.S. patent 4,265,732.

Art Unit: 1764

With regard to claim 3, Dinulescu discloses a reactor for producing low-molecular weight olefins (column 5 line 42) by pyrolysis of hydrocarbons, comprising a housing (Figure 2a (5)) with directing stationary blades (4), an inlet nipple (Figure 2a) for supplying feedstock, and outlet nipple (figure 2a) for carrying off cracked gas and a working wheel (1) provided with a blade crown (3), wherein the said housing has an annular cavity (Figure 2a) for circulation of hot pyrolyzed gas, said cavity containing the directing stationary blades and surrounding the blade crown of the working wheel along the periphery, and the said inlet nipple for supplying feedstock and outlet nipple for drawing off cracked gas communicating with the cavity (Figure 2a).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1764

7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dinulescu, U.S. patent 4,265,732.

With regard to claim 4, Dinulescu discloses essentially the same apparatus as that of the present claim but fails expressly to disclose a heat-resistant skin and an insulating layer.

At the time of the invention it would have been obvious to one skilled in the art to add an insulating layer and a heat resistant skin to the apparatus of Dinulescu. Heat insulation and heat-resistant skins for chemical reactors are well-known in the art.

The motivation would have been to maintain the elevated temperature in the reactor while minimizing heat loss through the outer portion of the apparatus.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rick Varcoe, whose telephone number is (703) 306-5477. The examiner can normally be reached Monday through Friday from 9:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marian Knode, can be reached on (703) 308-4311.

The FAX telephone number for this Group Art Unit is (703) 305-3599 (for Official papers after Final), (703) 305-5408 (for other Official papers) and (703) 305-6357 (for Unofficial papers).

When filing a FAX in Group 1700, please indicate in the Header (upper right) "Official" for papers that are to be entered into the file, and "Unofficial" for draft documents and other communications with the PTO that are not for entry into the file of the application. This will expedite processing your papers.

Art Unit: 1764

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
